PROFILE

Senior Software Engineer working with React, TypeScript, Node.js, Python, and SQL. Experience with web and mobile apps, APIs, databases, and cloud hosting. Handles planning, coding, testing, and releases. Works with designers and other developers to build features, fix problems, and maintain existing software.

CORE TECHNICAL SKILLS

Programming Languages
JavaScript, TypeScript, Python, SQL

Frontend
React, Next.js, HTML, CSS, responsive design, accessibility

Backend & APIs
Node.js, Express, FastAPI, REST APIs, authentication and authorization

Databases
PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps
AWS, Docker, GitHub Actions, CI/CD, Linux

Testing & Quality
Jest, React Testing Library, Playwright, pytest, code reviews

Tools & Practices
Git, Agile/Scrum, API documentation, application monitoring

EDUCATION

Florida State University — Master's Degree
Computer Science | NOV 2023 – SEP 2025

Goce Delchev University Stip — Bachelor's Degree
Computer Science, Computer Engineering | SEP 2022 – JUN 2025

PROFESSIONAL EXPERIENCE

Titan TV Mounting — Senior Software Engineer

JUL 2026 – PRESENT

- Develop and maintain web applications for customer bookings, installation scheduling, and service management.
- Build APIs and database features for estimates, customer records, and technician assignments.
- Plan software changes, review code, write tests, and manage releases for internal tools.

Chetu, Sunrise, FL — Senior Software Engineer

JUL 2024 – JUN 2026

- Worked on web and mobile apps with React, React Native, and TypeScript, sharing components and connecting APIs.
- Built Node.js services and PostgreSQL databases for document handling, reports, and user permissions.
- Maintained cloud hosting, automated tests, and release pipelines. Took part in code reviews and design discussions.

Citrix, Fort Lauderdale, FL — Software Developer

MAY 2022 – JUN 2024

- Built features with React, Python, and SQL for customer apps and internal tools.
- Connected third-party services, fixed bugs, and improved page loading speed.
- Maintained Docker setups and wrote instructions for releases and support.

Freelance — Software Developer

FEB 2014 – MAR 2020

- Built and maintained web and mobile apps using React, Node.js, Python, and SQL databases.
- Created a document portal with file uploads, search, and user permissions.
- Created a mobile app for logging meals, viewing nutrition summaries, and tracking daily progress.
- Added APIs, sign-in features, and payment processing. Set up hosting, wrote documentation, and provided ongoing support.

SELECTED PROJECT WORK

AI chat tool for searching company documents and support guides.

- Python and PostgreSQL backend that reads documents and finds relevant passages. An LLM API answers questions and links to the documents used in each answer.
- React interface with chat history and search filters. User permissions limit which files each person can access. Background updates keep new documents searchable, with tests for missing or conflicting information.

Mobile app for logging meals and tracking nutrition.

- iOS and Android app using React Native and TypeScript, with Node.js for accounts and meal records. Users can describe meals in their own words and correct estimated calories and nutrients.
- Meal entries saved offline and synced when the connection returns. Daily summaries, reminders, and weekly charts, with tests for portion sizes and dates across time zones.

VR training app for practicing installation tasks.

- Unity and C# scenes with tool selection, step-by-step instructions, and progress checks. A record of each action and its time helps trainers review a session.
- Python API and dashboard for reviewing completed steps, missed tasks, and repeat attempts. Session data saved locally during connection problems and uploaded afterward.

Desktop app for organizing documents and syncing cloud files.

- Electron, React, and Node.js app with folders, file search, upload queues, and transfer progress. Cloud-storage APIs check for new or changed files.
- Paused uploads can resume without starting over. Checks for duplicate files and conflicting versions, with automatic retries after connection errors. Protected sign-in details and error logs that exclude document contents.

Mobile app for booking appointments and assigning service jobs.

- Flutter app using Firebase for accounts, data storage, and notifications. Customers request appointments, while staff check technician availability and assign jobs.
- Separate permissions for customers, technicians, and office staff. Checks prevent double bookings. Support for rescheduling, cancellation records, and viewing upcoming jobs offline.
